Soft PVC Profiles

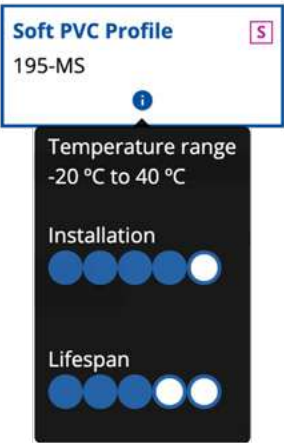

The most common sealing profiles are also available in **soft PVC**. The availability of material types per profile is shown in the product configurator. This meets customer demand for longer lasting refrigerator seals.

Following the initial legislative changes, a PVC based compound was introduced that reduces the adverse effects of the changed formulation, but does not eliminate them entirely. The sealing profiles made from soft PVC in our range have the suffix **MS** or **AS** (for example 195 MS and 20 AS). Profiles manufactured from soft PVC have the following distinguishing properties:

- Temperature range from **-20 °C to 40 °C**
- Flexible material and therefore easier to install
- Less sensitive to creasing and folding as a result of storage and transport

Soft PVC profiles are suitable for use in blast chillers, shock freezers, freezer room doors and for equipment with high intensity usage. The very best choice for these applications are our Extended Life profiles made from TPE (see page 40).

Scan the **QR code** for more specific information about the properties of soft PVC profiles.
